

AutoVet Veterinary Clinic Management System

User Acceptance Testing (UAT) Survey

Respondent group: **Front-Desk Staff**

Pet Wellness Animal Clinic

Purpose and instructions

This survey evaluates AutoVet, the clinic management system used at Pet Wellness Animal Clinic, as part of its User Acceptance Testing. You are being asked to evaluate the parts of the system you work with at the front desk: registering clients and pets, booking appointments and walk-ins, preparing invoices, receiving stock into inventory, and sending notifications to clients.

For every statement in Section 2, put a tick in the one box that matches your experience of the system. Please answer from what you actually observed while using AutoVet, not from what you expect it should do. There are no right or wrong answers, and your responses stay confidential and are reported only as group totals.

1 Strongly Disagree	2 Disagree	3 Agree	4 Strongly Agree
------------------------	---------------	------------	---------------------

SECTION 1 | General and demographic information

1.	Age	☐ 18-25 ☐ 26-35 ☐ 36-45 ☐ 46-55 ☐ 56 and above
2.	Sex	☐ Female ☐ Male ☐ Prefer not to say
3.	Position at the clinic	☐ Receptionist / Front desk ☐ Veterinary assistant ☐ Other: _____
4.	Years of front-desk or clinic support experience	☐ Less than 1 ☐ 1-3 ☐ 4-7 ☐ More than 7
5.	Length of service at this clinic	_____
6.	How often do you use AutoVet?	☐ Several times a day ☐ Once a day ☐ A few times a week ☐ About once a week ☐ Rarely
7.	Device you most often use for AutoVet	☐ Desktop ☐ Laptop ☐ Tablet ☐ Smartphone
8.	Roughly how many clients do you attend to in a day?	☐ 1-10 ☐ 11-20 ☐ 21-40 ☐ More than 40
9.	Have you used another clinic or booking system before?	☐ Yes ☐ No If yes, which: _____

SECTION 2 | System evaluation

Tick one box per statement using the scale above.

A. Effectiveness - accuracy, completeness and integrity

Whether the system records what you encode without error, keeps records whole, keeps information restricted to the right roles, records an audit trail, and stays available through your shift.

	Statement	1	2	3	4
1.	Client and pet registration saves every detail I encode, including contact number and address.				
2.	The system warns me when a client I am adding already exists, so duplicate records are avoided.				
3.	A walk-in is recorded as accurately and completely as a scheduled appointment.				

	Statement	1	2	3	4
4.	Appointment status changes - approved, declined, completed, cancelled - are saved correctly.				
5.	Invoices I prepare list the correct services, products, quantities and amounts.				
6.	Stock I receive into inventory is reflected accurately in the item's stock level.				
7.	I can open the records my role allows, and management-only information such as revenue reporting stays hidden from my account.				
8.	The actions I take are traceable in the audit log, so corrections can be followed up properly.				
9.	Notifications sent to clients go to the correct client and carry the correct details.				
10.	The system stays available throughout my shift without unexpected downtime.				

B. Efficiency - resources and time

Whether counter tasks are completed quickly, with few navigation steps, and whether records are easy to search and update.

	Statement	1	2	3	4
11.	Registering a new client together with their pet takes only a few minutes.				
12.	Booking an appointment takes a small number of steps.				
13.	Recording a walk-in is quick enough to do while other clients are waiting.				
14.	Searching by client name, contact number or pet name returns results quickly.				
15.	Preparing an invoice for a completed visit requires little re-typing of details already in the system.				
16.	Checking which veterinarian is available on a given day is quick.				
17.	Recording a stock delivery is done without delay.				
18.	I can move between appointments, client records and billing without excessive navigation.				
19.	Pages load quickly enough that clients at the counter are not kept waiting.				
20.	Overall, AutoVet shortens the time I used to spend on manual logbooks and forms.				

C. Satisfaction - user response and trust

Whether the screens are clear, whether you trust the system with client information, and how well it supports your work at the counter.

	Statement	1	2	3	4
21.	The screens are clear and I rarely lose track of where I am.				
22.	Buttons and labels say plainly what they will do.				
23.	Confirmation messages reassure me that what I entered was saved.				
24.	When I make a mistake, the message tells me what needs to be fixed.				
25.	I am confident that client information I handle is kept confidential.				
26.	I trust the appointment list enough to rely on it when answering a client's question.				
27.	The system matches how our front desk actually operates.				
28.	It reduces the paperwork I handle each day.				
29.	I learned to use the system without lengthy training.				

Statement		1	2	3	4
30.	I would rather work with AutoVet than go back to our previous way of working.				

SECTION 3 | Open-ended feedback

Please answer in your own words. Specific examples help us more than general comments - naming the screen, the record or the step where something happened lets us reproduce and fix it.

1. What do you like most about the system?

2. What problems did you encounter while using it?

3. What functional improvements would you suggest?

FOR RESEARCHER USE ONLY | Tabulation

Results for this respondent group are tabulated separately from the other groups. Compute the weighted mean per category, then the overall mean, and read each against the interpretation ranges.

Category	Items	Total	Weighted mean	Interpretation
Effectiveness				
Efficiency				
Satisfaction				
Overall				

Range	Verbal interpretation
3.26 - 4.00	Strongly Agree
2.51 - 3.25	Agree
1.76 - 2.50	Disagree
1.00 - 1.75	Strongly Disagree
