

AutoVet Veterinary Clinic Management System

User Acceptance Testing (UAT) Survey

Respondent group: **Veterinarians and Clinic Administrators**
Pet Wellness Animal Clinic

Purpose and instructions

This survey evaluates AutoVet, the clinic management system used at Pet Wellness Animal Clinic, as part of its User Acceptance Testing. You are being asked to evaluate the parts of the system you use in clinical and administrative work: appointments and veterinarian schedules, medical records, billing and weight-based service pricing, inventory with its AI stock forecast, reports, and role-based access with audit logging.

For every statement in Section 2, put a tick in the one box that matches your experience of the system. Please answer from what you actually observed while using AutoVet, not from what you expect it should do. There are no right or wrong answers, and your responses stay confidential and are reported only as group totals.

1 Strongly Disagree	2 Disagree	3 Agree	4 Strongly Agree
------------------------	---------------	------------	---------------------

Section 2, Part D applies to Clinic Administrators only.

SECTION 1 | General and demographic information

1.	Age	☐ 18-25 ☐ 26-35 ☐ 36-45 ☐ 46-55 ☐ 56 and above
2.	Sex	☐ Female ☐ Male ☐ Prefer not to say
3.	Primary role in the clinic	☐ Veterinarian ☐ Clinic Administrator ☐ Both
4.	Years of professional veterinary practice or clinic administration	☐ Less than 1 ☐ 1-3 ☐ 4-7 ☐ 8-15 ☐ More than 15
5.	Length of service at this clinic	_____
6.	How often do you use AutoVet?	☐ Several times a day ☐ Once a day ☐ A few times a week ☐ About once a week ☐ Rarely
7.	Device you most often use for AutoVet	☐ Desktop ☐ Laptop ☐ Tablet ☐ Smartphone
8.	Have you used another clinic management system before?	☐ Yes ☐ No If yes, which: _____
9.	Roughly how many patients do you attend to in a day?	☐ 1-5 ☐ 6-10 ☐ 11-20 ☐ More than 20

SECTION 2 | System evaluation

Tick one box per statement using the scale above.

A. Effectiveness - accuracy, completeness and integrity

Whether the system processes and stores your data without error, keeps records whole, respects role-based confidentiality, records an audit trail, and stays available.

	Statement	1	2	3	4
1.	Appointment details I enter - pet, service, date, time and assigned veterinarian - are saved exactly as I encoded them.				
2.	A medical record keeps every field I complete, including chief complaint, findings, diagnosis, treatment plan and follow-up date.				
3.	Invoice subtotals, discounts and totals are computed correctly for the services and products I bill.				

	Statement	1	2	3	4
4.	Services priced by the pet's weight or size class are charged at the correct rate for that pet.				
5.	Inventory stock levels adjust correctly when items are dispensed, received, or deducted on a finalized invoice.				
6.	The AI inventory forecast produces stock-out predictions that are consistent with our actual consumption.				
7.	Batch, lot and expiration details stay correctly attached to the inventory item they belong to.				
8.	I can view and edit only the records my role allows; information outside my role stays inaccessible to me.				
9.	Creating, editing, archiving and restoring records are recorded in the audit log and can be traced back to the user who did it.				
10.	An archived record can be restored complete, with its linked appointments, invoices and medical history intact.				
11.	Figures on the dashboard and in reports agree with the underlying patient, appointment and billing records.				
12.	The system stays available during clinic hours, without unexpected downtime or loss of data I had already saved.				

B. Efficiency - resources and time

Whether tasks are completed quickly, with few navigation steps, and whether records are easy to search and update.

	Statement	1	2	3	4
13.	I can record a complete consultation within a reasonable time for a normal patient load.				
14.	Encoding a medical record takes fewer steps than the manual or paper method we used before.				
15.	Searching for a client, pet, invoice or medical record returns results quickly.				
16.	I can reach any main module from the dashboard in only a few clicks.				
17.	Booking, approving or rescheduling an appointment is completed without repeated back-and-forth navigation.				
18.	Assigning a veterinarian and checking that veterinarian's schedule is straightforward.				
19.	Generating an invoice from a completed appointment needs little or no re-encoding of what I already recorded.				
20.	Updating inventory - receiving stock or correcting a count - is quick to do.				
21.	The AI inventory forecast returns its result without an excessive wait.				
22.	Lists and pages load fast enough that I do not lose my place in a task.				
23.	Overall, AutoVet reduces the time I used to spend on manual record-keeping.				

C. Satisfaction - user response and trust

Whether the interface is clear, whether you trust the system with your data and its figures, and how well it supports your daily workflow.

	Statement	1	2	3	4
24.	The interface is visually clear and the labels are easy to understand.				

	Statement	1	2	3	4
25.	Text, buttons and tables are readable on the device I use for work.				
26.	Confirmation messages tell me plainly when an action has succeeded.				
27.	When something goes wrong, the message helps me understand what to correct.				
28.	I am confident that client and patient data are stored securely.				
29.	I trust the figures the system reports enough to use them in clinic decisions.				
30.	I trust the AI inventory forecast enough to let it guide our reordering.				
31.	The system fits the way our clinic actually works from day to day.				
32.	It reduces the administrative time I spend away from clinical work.				
33.	I needed little training before I was comfortable using the system on my own.				
34.	I would recommend AutoVet to another veterinary clinic.				

D. Administrative controls

Answer this part only if you hold a Clinic Administrator role. Veterinarians without administrative access may leave it blank.

	Statement	1	2	3	4
35.	I can schedule system maintenance so that clients are warned before the portal goes offline.				
36.	The maintenance countdown shown to clients matches the schedule I set.				
37.	Creating user accounts and assigning roles is straightforward.				
38.	Maintaining clinic settings - services, pricing rules, categories and units - is easy to do.				
39.	I can review the audit log and account activity when I need to check who changed a record.				

SECTION 3 | Open-ended feedback

Please answer in your own words. Specific examples help us more than general comments - naming the screen, the record or the step where something happened lets us reproduce and fix it.

1. What do you like most about the system?

2. What problems did you encounter while using it?

3. What functional improvements would you suggest?

FOR RESEARCHER USE ONLY | Tabulation

Results for this respondent group are tabulated separately from the other groups. Compute the weighted mean per category, then the overall mean, and read each against the interpretation ranges.

Category	Items	Total	Weighted mean	Interpretation
Effectiveness				
Efficiency				
Satisfaction				
Overall				

Range	Verbal interpretation
3.26 - 4.00	Strongly Agree
2.51 - 3.25	Agree
1.76 - 2.50	Disagree
1.00 - 1.75	Strongly Disagree

Respondent signature (optional)
