AutoVet

Tech Stack, Repository and Deployment

1. Tech Stack

Separate backend and frontend (not a monolith), plus a Python AI forecasting module.

Layer	Technology
Backend	**Laravel 12** (PHP 8.2) REST API, authentication via **Laravel Sanctum**
Frontend	**React 19 + Vite + Tailwind CSS**, two apps: *Admin* (clinic staff dashboard, JavaScript) and *Portal* (pet-owner portal, TypeScript)
Database	**MySQL** (Laragon MySQL locally; **TiDB Serverless**, MySQL-compatible, in production)
AI / Forecasting	**Python**: scikit-learn, pandas, NumPy for inventory stock forecasting (run by Laravel as a Python subprocess)
Backend libraries	DomPDF (PDF invoices), Flysystem S3 (file uploads to Supabase), Brevo (email), libphonenumber (phone validation). Installed but not enabled: Laravel Reverb + Pusher (real-time), Laravel Horizon (queues), Sentry (error tracking)
Frontend libraries	TanStack React Query, React Hook Form + Zod, React Router 7, Recharts, jsPDF / jspdf-autotable, Laravel Echo, Lucide icons, react-toastify

2. GitHub Repository

URL: https://github.com/andreidcnyy/AutoVet (fork of CodeWithBrielle/AutoVet)

Repository description:
AutoVet: hybrid veterinary clinic management system. Online booking for pet owners, records, invoicing, inventory, and AI stock forecasting for staff. Laravel 12 + React 19 + MySQL + Python. Setup: README.md

Local setup:
1. Backend: `cd backend && composer install`, then create `backend/.env` by copying `.env.render.example`, and run `php artisan key:generate`
2. Create a MySQL database named `autovet`, point the DB_* values in `.env` at your local MySQL, set `FILESYSTEM_DISK=public`, then run `php artisan migrate --seed` and `php artisan serve`
3. AI forecasting: `pip install -r backend/ai/requirements.txt`
4. Frontend: `cd frontend/admin && npm install && npm run dev` (same for `frontend/portal`)

3. Deployment

Component	Infrastructure / Cloud
Frontend (Admin and Portal)	Vercel
Backend (Laravel + Python AI)	Render (Docker image)
Database	TiDB Serverless (MySQL)
File uploads	Supabase Storage (S3-compatible)
Email	Brevo
Uptime / keep-alive	UptimeRobot

Production URL: https://autovet-admin.vercel.app
Backend API: https://autovet.onrender.com

Test account (Clinic Admin):

Email	Password
admin@autovet.com	password123
