

PET WELLNESS ANIMAL CLINIC

# AutoVet User Manual

A plain-language guide to the Client Portal for pet owners  
and the Clinic Admin System for staff.

Version 3.0  
Updated 19 September 2026  
Covers Portal + Admin System

## Contents

PART I • INTRODUCTION

- 1 About AutoVet
- 2 Who Uses the System
- 3 System Requirements & Access
- 4 Common Screen Elements

PART II • CLIENT PORTAL – FOR PET OWNERS

- 5 Creating an Account
- 6 Logging In / Forgot Password
- 7 The Owner Dashboard
- 8 Registering and Managing Pets
- 9 Booking an Appointment
- 10 Viewing Visit History
- 11 Viewing Invoices and Receipts
- 12 Notifications
- 13 Leaving a Review
- 14 Managing Your Profile and Account
- 15 Using the Virtual Assistant

PART III • CLINIC ADMIN SYSTEM – FOR STAFF

- 16 Logging In as Staff
- 17 Dashboard Overview
- 18 Viewing Analytics
- 19 Managing Patient Records
- 20 Handling Appointments and Walk-Ins
- 21 Managing Inventory with AI Forecasting
- 22 Generating Invoices and Billing
- 23 Monitoring Reviews and Feedback
- 24 Sending Client Notifications

- 25     Configuring Maintenance and Settings
- 26     Updating Your Profile, Notifications, and Password

#### PART IV • REFERENCE

- 27     Status Definitions
- 28     Automated Background Tasks
- 29     Troubleshooting
- 30     Data Safety, Privacy, and Backups
- 31     Known Limitations
- 32     Support and Contact

**About this manual.** Everything here describes what the system actually does today, not what it was planned to do. Where a feature is switched off or only partly finished, it is listed honestly in Known Limitations instead of being described as if it works. Money amounts appear in the system with the peso sign; this manual writes them as *PHP 1,200.00* so they display correctly everywhere.

---

## PART I Introduction – *start here, whoever you are*

### 1 About AutoVet

AutoVet helps a veterinary clinic run its day, and helps pet owners handle their visits online. It is made of three pieces that work together.

---

#### Client Portal

A website for pet owners. Register, add your pets, book appointments, see invoices, and leave a review.

---

#### Clinic Admin System

A dashboard for clinic staff. Manage patients, appointments, medical records, billing, and stock.

---

#### Stock Forecasting

A prediction tool that estimates when each medicine or supply will run out, so it can be reordered in time.

The three are connected. When you book in the portal, the clinic sees it right away. When the clinic finishes an invoice, the supplies used are taken out of stock automatically. And that stock usage is exactly what the forecasting tool learns from.

#### WHAT AUTOVET DOES NOT DO

- **It does not diagnose animals.** Only a licensed veterinarian decides what is wrong and how to treat it.
- **It does not take online payments.** Invoices are prepared and recorded here, but you pay at the clinic.
- **It does not order stock by itself.** It recommends what to reorder; a person places the order.

## 2 Who Uses the System

Everyone who signs in has a **role**. Your role decides which screens you can open and what you are allowed to change. There are five.

---

### **Pet Owner**

Uses the Client Portal. Sees only their own pets, bookings, and invoices — never anyone else's.

---

### **Staff**

Front desk. Handles appointments, patients, billing, stock, and analytics. Cannot open Settings or Reviews, and does not see revenue figures.

---

### **Veterinarian**

Everything Staff can do, plus writing medical records and diagnoses, and access to Settings.

---

### **Clinic Admin**

Full control of one clinic: staff accounts, services, pricing, stock, reports, and settings.

---

### **Super Admin**

Looks after the whole platform and can work across clinics. Used by the system's administrators, not by clinic staff.

---

#### WHICH SCREENS EACH ROLE CAN OPEN

| SCREEN                | CLINIC ADMIN | VETERINARIAN | STAFF |
|-----------------------|--------------|--------------|-------|
| Dashboard             | Yes          | Yes          | Yes   |
| Analytics             | Yes          | Yes          | Yes   |
| Patients              | Yes          | Yes          | Yes   |
| Appointments          | Yes          | Yes          | Yes   |
| Inventory             | Yes          | Yes          | Yes   |
| Invoices              | Yes          | Yes          | Yes   |
| Revenue figures       | Yes          | Yes          | —     |
| Reviews & Feedback    | Yes          | Yes          | —     |
| Settings              | Yes          | Yes          | —     |
| Write medical records | Yes          | Yes          | —     |

GOOD TO KNOW

These limits are enforced by the system itself, not just hidden from view. If someone types the web address of a screen they are not allowed to open, they get a “Forbidden” message — never someone else's data.

## 3 System Requirements & Access

### WHAT YOU NEED

- An up-to-date web browser — Chrome, Edge, Firefox, or Safari.
- An internet connection.
- Nothing to install. Both systems open in the browser.

Both work on a phone or tablet as well as a computer. The portal also has a dark-mode switch if you prefer a darker screen.

### WHERE TO GO

- **Pet owners** — use the portal address the clinic gave you.
- **Clinic staff** — use the admin address the clinic gave you.

### GETTING AN ACCOUNT

- Pet owners create their own account (see Section 5).
- Staff accounts are created for them by a Clinic Admin or Veterinarian. Staff cannot sign themselves up.

## 4 Common Screen Elements

A few things appear over and over. Once you recognise them, every screen gets easier.

---

### Sidebar

The menu down the left side of the admin system. It only lists the screens your role is allowed to open.

---

### Search box

Narrows the list on screen as you type. You do not need to press Enter.

---

### Filter buttons

Buttons such as *All Items*, *Low Stock*, or *Expiring* that show only one group at a time.

---

### Status badges

Small coloured labels. Green is fine, amber needs attention, red is urgent.

---

### Notification bell

Shows how many messages you have not read yet.

---

### Page arrows

Long lists are split into pages. Use the arrows at the bottom to move through them.

---

#### SCREENS UPDATE ON THEIR OWN

Most screens refresh themselves when something changes — you rarely need to press reload. If the live connection drops, screens still catch up every 10 to 30 seconds, and whenever you click back into the browser tab. A short delay is normal. A screen frozen for minutes is not — reload it.

---

## PART II Client Portal *— for pet owners*

### 5 Creating an Account

There are two ways to sign up. Pick whichever is easier for you.

#### OPTION A — SIGN UP WITH YOUR EMAIL

- 1 Open the portal and choose **Register**.
- 2 Fill in your details and choose a password (at least 8 characters).
- 3 Submit the form. The system emails you a confirmation link.
- 4 Open your email and click that link.
- 5 You can now log in.

The link works only once and expires after a day. If it expires, simply register again.

#### OPTION B — SIGN UP WITH GOOGLE

Choose the Google button on the login or register screen and pick your Google account. You will not need to create a separate password.

#### ONE MORE STEP THE FIRST TIME

After your first sign-in, the system may ask for your contact number and address before you can book. The clinic needs these so they can reach you about your appointment.

#### IF YOU SEE “TOO MANY ATTEMPTS”

For safety, the system limits how often anyone can try to register, log in, or reset a password. If you try several times quickly, it asks you to wait about a minute. This is normal and there is nothing wrong with your account — just wait and try again.

## 6 Logging In / Forgot Password

### LOGGING IN

- 1 Open the portal and enter your email and password — or use the Google button.
- 2 You land on your Dashboard.

### IF YOU FORGOT YOUR PASSWORD

- 1 Choose **Forgot password** on the login screen.
- 2 Type your email address.
- 3 Check your email for a reset link.
- 4 Open the link and set a new password.

That link also works only once and expires.

#### WHY NOBODY CAN TELL YOU YOUR OLD PASSWORD

The system never emails your existing password — it genuinely cannot. Passwords are scrambled before they are stored, and there is no way to unscramble them. Not even clinic staff or the system administrator can read your password. That is exactly what you want.

### MESSAGES YOU MIGHT SEE INSTEAD OF YOUR DASHBOARD

---

#### Account blocked

The clinic has paused your portal access. Please contact the clinic directly.

---

#### Pending deletion

You asked for your account to be deleted and the waiting period has not finished. You can usually cancel from this screen.

---

#### Maintenance

The clinic is doing scheduled work on the system. Try again shortly.

## 7 The Owner Dashboard

The Dashboard is your home screen. Everything important is gathered here:

- Your pets, with a shortcut into each pet's profile.
- Your upcoming appointments.
- Recent messages from the clinic.
- A short summary of your pet's recent medical history.
- Pet care suggestions.
- Any clinic announcement, shown as a banner across the top.

From here you can jump to booking, your pets, your invoices, and your notifications.

## 8 Registering and Managing Pets

### ADDING A PET

- 1 From your Dashboard, choose **Add Pet**.
- 2 Fill in the form. You can record:
  - Name, species, and breed
  - Date of birth or age group
  - Sex and colour
  - Weight and size category
  - Allergies and current medication
  - Any notes, and a photo if you like
- 3 Save. Your pet now appears on your Dashboard.

#### BREED NOT IN THE LIST?

The species and breed lists are managed by the clinic. Choose the closest match, type the exact breed in the Notes box, and mention it at your visit.

### VIEWING AND EDITING

Open the pet from your Dashboard to see its profile and medical summary. Choose **Edit** to change any detail and save.

#### KEEP WEIGHT UP TO DATE

Some services are priced by your pet's size or weight. Accurate figures mean an accurate quote.

## 9 Booking an Appointment

- 1 Choose **Book Appointment**.
- 2 Pick the pet.
- 3 Pick the service you need.
- 4 Pick a date, then one of the available times.
- 5 Add any notes for the clinic.
- 6 Submit.

### WHAT HAPPENS NEXT

- Your booking is created as **PENDING**.
- The clinic sees the request immediately.
- You get an email confirming the request arrived.
- When the clinic reviews it, the status becomes **APPROVED** or **DECLINED**, and you are emailed either way.
- If it is declined, the clinic must give a written reason, which you can read on your Appointments screen.

#### PLEASE READ BEFORE YOU TRAVEL

A **PENDING** booking is a request, not a confirmed appointment. Wait for the **APPROVED** email before going to the clinic.

### WHY A TIME MIGHT DISAPPEAR

The available times come from the veterinarians' working hours. The system checks the slot again at the moment you submit, so two people can never book the same one. If a time vanishes while you are filling in the form, someone else took it first — just pick another.

## 10 Viewing Visit History

The **Appointments** screen lists all your bookings — past and upcoming — with the status of each one. Section 27 explains what every status means.

- For a declined booking, the clinic's written reason appears alongside it.
- Completed visits stay in the list as your visit history.

What the vet actually found — the examination notes, the diagnosis, and the treatment plan — is not on the appointments list. You will find it inside your **pet's profile**, under its medical summary.

## 11 Viewing Invoices and Receipts

The **Invoices** screen lists every invoice raised for your pets, showing the date, invoice number, amount, and status.

- Open an invoice to see each service and product listed separately.
- Download it as a PDF to keep or print.

### DRAFT VERSUS FINAL

A **DRAFT** invoice is still being prepared by the clinic and can still change. **FINALIZED** and **PAID** invoices are settled records.

Payment is made at the clinic. The portal does not accept card or online payment.

## 12 Notifications

The **Notifications** screen collects everything the clinic sends you — appointment updates, reminders, and direct messages.

- Unread items are marked. Opening one marks it as read.
- Something important may also appear as a pop-up when you log in, which you need to acknowledge.
- Clinic-wide announcements show as a banner on your Dashboard.

### EMAILS SENT AUTOMATICALLY

- Appointment request received
- Appointment approved
- Appointment declined
- Appointment reminders

If an expected email never arrives, check your spam folder first, then ask the clinic to confirm the email address on your record.

## 13 Leaving a Review

After a completed visit, the portal invites you to share how it went.

- 1 Open the review invitation from your Dashboard or Notifications.
- 2 Give a star rating and write your comments.
- 3 Submit.

The clinic reads every review. With your review approved, it may also be shown publicly on the clinic's website.

## 14 Managing Your Profile and Account

From your profile you can:

- Update your name, contact number, and address
- Change your password
- Change your profile photo
- Ask for your account to be deleted

### ABOUT DELETING YOUR ACCOUNT

Asking to delete your account starts a waiting period rather than erasing everything at once. During that time your account is marked *pending deletion*, and you can still contact the clinic to stop it. The delay exists because clinics are required by law to keep treatment and billing records.

### SIGNED IN SOMEWHERE YOU SHOULD NOT BE?

Your profile lists the devices currently signed in to your account. You can sign out a single device, or sign out everywhere except the one you are using. Useful if you lose your phone.

## 15 Using the Virtual Assistant

The portal has a built-in assistant that answers common questions about the clinic — services, opening hours, how to book, and how the portal works.

### WHAT IT IS

It matches your question against a prepared list of topics and forgives small spelling mistakes. Think of it as a very fast way to look things up.

### WHAT IT IS NOT

It is not a chatting AI, it cannot see your pet's records, and it must never be used for medical advice. If it cannot answer your question, contact the clinic directly.

---

## PART III Clinic Admin System *— for clinic staff*

### 16 Logging In as Staff

- 1 Open the admin address and enter your work email and password.
  - 2 You land on the Dashboard. The sidebar shows only the screens your role allows.
- Your account is created for you by a Clinic Admin or Veterinarian under **Settings → Users / Roles**.
  - You can change your own password at any time from the Change Password screen.
  - Repeated failed logins are blocked for about a minute. Wait, then try again.

#### ALWAYS LOG OUT ON A SHARED COMPUTER

Logging out ends your session on the server, not just in the browser. Closing the tab is not the same thing.

### 17 Dashboard Overview

The Dashboard is the clinic's daily overview. It shows:

- **Headline counters** — total pets, total clients, appointments confirmed for today, appointments confirmed for tomorrow, and today's cancelled or declined bookings. Click any counter to see the list behind it.
- **Today's schedule** — who is coming in and when.
- **Charts** — new clients per month, products sold per category, services rendered per category.
- **Recent notifications**.
- **Sales summary** — revenue for the last 30 days and the top services.

#### STAFF SEE A SLIGHTLY SMALLER DASHBOARD

Everything above is visible to Staff except the sales summary. Revenue figures are limited to Clinic Admin and Veterinarian.

The counters deliberately exclude internal test and demo records, so the numbers reflect the real practice.

## 18 Viewing Analytics

The Analytics screen shows trends built from real invoices and real stock usage:

- Transaction trends over the last 12 months
- Transaction statistics for the last 30 days
- Stock consumption over the last 6 months
- A summary of current stock

Use it to spot busy seasons, quiet periods, and which products move fastest. Clinic Admin, Veterinarian, and Staff can all open this screen.

## 19 Managing Patient Records

### FINDING A PATIENT

Search by pet name or owner name, or filter by species. The search stays fast as the list grows.

### WHAT A PATIENT PROFILE HOLDS

- Pet details — species, breed, date of birth, sex, colour, weight, size, allergies, medication, notes
- Owner details — name, phone, email, address
- Medical history
- Invoice history

### MEDICAL RECORDS

A medical record is attached to a pet and, where relevant, to an appointment. It records the chief complaint, findings, diagnosis, treatment plan, notes, and a follow-up date.

#### WHO CAN WRITE ONE

Writing medical records is a clinical action, limited to Veterinarian and Clinic Admin. Staff can read them but not create them.

#### DELETING A PATIENT DOES NOT ERASE IT

Deleting hides the patient from lists but keeps the record, because treatment and billing history must stay auditable. If something was deleted by mistake, restore it from **Settings → Archive & Recovery**.

When a client who already exists in your records later signs up on the portal, the system links them to their existing record instead of creating a duplicate.

## 20 Handling Appointments and Walk-Ins

The Appointments screen lists bookings made in the portal together with appointments created at the clinic.

### PROCESSING A BOOKING REQUEST

---

#### Approve

Confirms the appointment. The owner is emailed automatically.

---

#### Decline

Needs a written reason of at least 10 characters. The reason is saved and shown to the owner, and a decline email is sent.

---

#### Complete

Marks the visit finished once the patient has been seen.

---

#### Remind

Sends the owner a reminder about the appointment.

These four actions are limited to Clinic Admin, Veterinarian, and Super Admin.

### WALK - INS

Clients who arrive without booking are registered through the walk-in flow. Walk-ins skip the time-slot check on purpose — there was no slot to book. They are flagged as walk-ins so that reporting stays honest and booked visits remain countable separately.

#### DO NOT MISS A NEW REQUEST

The sidebar shows a count of items waiting for attention, so a new booking is not lost during a busy clinic day.

## 21 Managing Inventory with AI Forecasting

### READ THIS FIRST – STOCK IS KEPT IN BATCHES

Stock is not one running total per product. Every delivery is its own **batch**, with its own expiry date, supplier, and cost. This matters because medicines expire.

When stock is used, the system takes it from the **oldest batch first** and moves to the next when that one runs out. This mirrors what you already do on the shelf: use the stock closest to expiring before it goes to waste.

### READING THE INVENTORY SCREEN

Each row is a **product**, showing its total across all batches. Click the arrow at the left of a row to expand it and see the individual batches, oldest first. The top batch in that list is the one the next invoice will draw from.

### THE FOUR SUMMARY CARDS

---

#### Total stock items

How many different products you stock. Receiving more of something you already stock does *not* raise this number.

---

#### Low stock alerts

Products the forecast says are running low.

---

#### Expiring products

Batches expiring within 30 days.

---

#### Expired products

Batches already past their expiry date.

The last two count *batches* rather than products on purpose — an expired batch is one physical box to pull off the shelf.

### RECEIVING A DELIVERY

- 1 Find the product and choose **Receive**.
- 2 Enter the quantity and batch number. Add lot number, expiry date, cost, selling price, supplier, and remarks where you have them.

3 Save.

A new batch is created and the product's total goes up. Use **Add Item** instead when it is a product the clinic has never stocked before. Receiving stock is limited to Clinic Admin, Veterinarian, and Super Admin.

#### HOW THE FORECAST WORKS

For each product, the system predicts when it will run out. It looks at how much has actually been dispensed over time, works out the daily usage rate, and projects the date stock will drop below your minimum level.

It learns only from **real dispensing** — supplies recorded when an invoice is finalized. Stock corrections and bulk data imports are deliberately ignored, because they are not real consumption.

#### CONFIDENCE LEVELS

##### HIGH

Usage has been steady. The predicted date is dependable.

##### MEDIUM

A usable trend, but with visible ups and downs.

##### LOW

Usage is erratic. Treat the date as a rough guide only.

#### THE SYSTEM TELLS YOU WHEN NOT TO TRUST IT

A new product needs at least **3 completed transactions** before any trend can be worked out. Until then it shows *Insufficient Data*, with a progress percentage and how many more transactions are needed. It deliberately shows this rather than inventing a prediction.

#### WHEN IT RUNS

Forecasts refresh automatically every night. A Clinic Admin or Veterinarian can also recalculate on demand from the inventory screen. Results are saved, so opening the screen is instant.

**WHAT THE FORECAST CANNOT KNOW**

It assumes usage stays steady. A disease outbreak, a vaccination drive, or a seasonal surge is a sudden change it cannot see coming. It also does not know supplier lead times or holidays. It recommends — it never orders.

Separately, the system checks for expiring stock every morning and notifies staff.

## 22 Generating Invoices and Billing

### CREATING AN INVOICE

- 1 Open **Invoices** and create a new one.
- 2 Select the patient.
- 3 Add services and products as lines.
- 4 Prices fill in automatically from the clinic's price list.
- 5 Save as **DRAFT** while you work.

### HOW PRICES ARE WORKED OUT

---

#### Fixed

One price for every patient.

---

#### Size-based

Priced by the pet's size category.

---

#### Weight-based

Priced by the pet's weight range.

You can type a manual price where needed. The price used is saved onto the invoice line, so changing your price list later never alters an invoice already written.

#### FINALIZING DOES THREE THINGS AT ONCE

Finalizing turns a draft into a settled record. At that moment the system:

1. Locks the invoice as **FINALIZED**.
2. Deducts stock, oldest batch first, for every consumable line marked to deduct.
3. Writes a usage entry for each deduction — which becomes the data the forecast learns from.

Because of step 2, finalize only when the visit is genuinely complete.

If there is not enough stock to cover a line, the system records the shortage rather than quietly allowing a negative stock level.

## DOCUMENTS AND REPORTS

- Invoices can be produced as PDFs.
- **Sales reports** — revenue summary, top services, transaction volume.
- **Patient reports** — species mix, registration trends, demographics.
- **Inventory reports** — low stock report.

These reports are limited to Clinic Admin, Veterinarian, and Super Admin.

## 23 Monitoring Reviews and Feedback

Reviews left by pet owners are collected here for Clinic Admin and Veterinarian.

- Read each review with its rating, comment, and the pet's species.
- Approve a review to publish it on the clinic's public website.

Reviews can also be managed from **Settings → Reviews**.

## 24 Sending Client Notifications

This screen is how the clinic talks to pet owners.

- Send a message to a client.
- Send an invoice to a client.
- Issue a formal warning, which the owner sees as a pop-up they must acknowledge.
- Review everything that has been sent.

## MESSAGE TEMPLATES

Automatic messages are built from templates you can edit yourself, so wording can be changed without a developer. The templates supplied cover appointment reminders, request received, approved, and declined.

### KEEP THE CURLY BRACKETS

Templates contain placeholders such as {pet\_name}, {date}, and {time}. The system swaps these for real values when the message is sent. If you delete them, the message goes out with the words missing.

Sending client notifications is limited to Clinic Admin, Veterinarian, and Super Admin.

## 25 Configuring Maintenance and Settings

Settings is available to Clinic Admin and Veterinarian only. It has ten sections.

---

### 1 · Clinic Profile

Clinic name, phone numbers, address, and logo. These appear on printed documents.

---

### 2 · Master Data

The reference lists the rest of the system uses: stock categories, service categories, units of measure, size categories, weight ranges. Changing these changes the choices staff see everywhere.

---

### 3 · Service Management

Your service list and pricing. Set how each service is priced, whether it needs a doctor, and which supplies it uses.

---

### 4 · Species & Breeds

The species and breed lists offered when a pet is registered.

---

### 5 · Users / Roles

Create, edit, and deactivate staff accounts, set each person's role, and reset passwords.

---

### 6 · Vet Schedule

Each veterinarian's working hours.

---

### 7 · System & AI Preferences

System-wide switches, including maintenance mode and AI features.

---

### 8 · Audit Logs

A record of what was done and who did it, searchable by date and exportable.

---

### 9 · Backup & Restore

Make a backup now, list existing backups, download one, or delete one. A backup also runs every night.

---

### 10 · Archive & Recovery

Deleted records are kept for a recovery window. Restore anything deleted by mistake here.

#### THE VET SCHEDULE CONTROLS ONLINE BOOKING

The bookable time slots your clients see come directly from the vets' working hours. An empty schedule means **no slots at all** for clients to book. If owners report that no times are available, check here first.

#### MAINTENANCE MODE

Turning it on shows a maintenance screen to users while you work. Remember to turn it off again afterwards.

## 26 Updating Your Profile, Notifications, and Password

Every clinic role has these three, whatever else they can open.

---

### Profile

View and update your own details.

---

### Notifications

Your own notification history. Mark all as read, dismiss one, or clear them all.

---

### Change Password

Change your own password. Choose something you do not use anywhere else.

---

## PART IV Reference *— look things up quickly*

27 Status Definitions

APPOINTMENT STATUS

| STATUS    | WHAT IT MEANS                                                            |
|-----------|--------------------------------------------------------------------------|
| PENDING   | Requested by the owner, waiting for the clinic to review. Not confirmed. |
| APPROVED  | Confirmed by the clinic. The owner has been emailed.                     |
| DECLINED  | Refused, with a written reason shown to the owner.                       |
| COMPLETED | The patient has been seen and the visit is finished.                     |
| CANCELLED | The appointment will not take place.                                     |

INVOICE STATUS

| STATUS    | WHAT IT MEANS                                          |
|-----------|--------------------------------------------------------|
| DRAFT     | Being prepared. Still editable. No stock deducted yet. |
| FINALIZED | Locked. Stock has been deducted and usage recorded.    |
| PAID      | Settled.                                               |
| CANCELLED | Voided.                                                |

STOCK FORECAST STATUS

| STATUS            | WHAT IT MEANS                                                  |
|-------------------|----------------------------------------------------------------|
| SAFE              | Stock is sufficient at the current rate of use.                |
| REORDER SOON      | Expected to run low within roughly two weeks.                  |
| LOW STOCK         | Predicted to run out soon, or already below the minimum level. |
| OUT OF STOCK      | Nothing left. Reorder immediately.                             |
| INSUFFICIENT DATA | Fewer than 3 recorded transactions, so no trend yet.           |

BATCH LABELS

| LABEL    | WHAT IT MEANS                             |
|----------|-------------------------------------------|
| IN STOCK | This batch has units available.           |
| EXPIRING | This batch expires within 30 days.        |
| EXPIRED  | Past its expiry date. Take it out of use. |

28 Automated Background Tasks

These run on their own. Nobody needs to start them.

00:00

Every stock forecast is recalculated.

00:00

Archived records past their recovery window are cleaned up.

03:00

The database is backed up.

07:00

Expiring stock is checked and staff are notified.

## 29 Troubleshooting

---

### **“A screen is empty or will not load.”**

Check that your role is allowed to open it (Section 2). If it should be available, log out, log back in, then refresh. If it keeps happening, report it with the screen name and the time.

---

### **“The numbers on screen do not match what I expected.”**

Deleted records are excluded, and the inventory screen counts *products* while stock is stored per *batch*. Both are working as intended.

---

### **“I received stock but the item count did not go up.”**

That is correct. Receiving raises that product's total quantity, not the number of different products. Expand the product row to see your new batch.

---

### **“My changes are not showing up immediately.”**

The live connection may have dropped. Screens catch up every 10 to 30 seconds and when you click back into the tab. Refresh manually if it is urgent.

---

### **“It says too many attempts, please wait.”**

A safety limit after repeated login, registration, or reset attempts. Wait about a minute.

---

### **“A forecast says Insufficient Data.”**

That product needs at least 3 completed transactions. The percentage shown tells you how close it is.

---

**“A client cannot book — no times are available.”**

Check **Settings** → **Vet Schedule**. Bookable slots come from the vets' working hours, so an empty schedule means no slots.

---

**“A client says they never received an email.”**

Ask them to check spam. Confirm the email address on their record is correct, then resend from Client Notifications.

---

**“Stock went negative, or a shortage was reported.”**

An invoice was finalized for more units than were in stock. Receive the delivery that is physically present, then review the affected invoice.

---

**“The system is slow the very first time I open it.”**

The server pauses when nobody is using it and takes a few seconds to wake up. The first page load after a quiet period is slower; everything after it is normal speed.

## 30 Data Safety, Privacy, and Backups

### WHAT PROTECTS THE DATA

- Passwords are scrambled in a way that cannot be reversed. Nobody can read them — not staff, not administrators.
- All traffic between the browser and the server is encrypted.
- Every request must carry a valid sign-in token. Logging out destroys it on the server.
- Each clinic's data is filtered at the database level, so one clinic cannot reach another's records even by editing a web address.
- Actions are written to an audit log together with who performed them.
- Deleted records are kept for a recovery window rather than destroyed.
- Backups run nightly to separate cloud storage, not on the same server as the system.
- Technical error details are never shown to users; they go to the system log.

### GOOD HABITS FOR STAFF

- **Never share an account.** Everyone needs their own, otherwise the audit log means nothing.
- Log out on shared computers.
- Deactivate accounts promptly when someone leaves.

## 31 Known Limitations

Stated plainly, so nobody is surprised.

---

### No online payments

Invoices are produced and recorded; payment is taken at the clinic.

---

### No SMS messaging

The system is built to support text messages and the connection point exists, but no SMS provider is connected. Messages go by email and in-app notification.

---

### Cloud sync is switched off

An offline-resilience mechanism exists — changes are queued and pushed to a central server, signed and protected against duplication — but it is off by default and the receiving end is not connected. Do not rely on the system working without internet in the current setup.

---

### No offline browser mode

Both websites need an internet connection.

---

### Forecasting looks at one factor

It considers past usage over time only — not seasonality, outbreaks, supplier lead times, or holidays.

---

### The chatbot follows a script

It answers from a fixed list of topics. It cannot hold a conversation or read pet records.

---

### No two-step login

Accounts are protected by password, email verification, and attempt limits. Two-factor authentication is not implemented.

---

### Fields are not individually encrypted

Passwords are scrambled, traffic is encrypted, and the database and file storage are encrypted by the hosting providers. Individual fields such as phone numbers are not separately encrypted inside the database.

---

### No mobile app

Both systems work in a mobile browser, but there is nothing to install from an app store.

## 32 Support and Contact

### IF YOU ARE A PET OWNER

Contact the clinic directly using the number or email shown on the portal. Staff can check your bookings, pets, and invoices for you.

### IF YOU ARE CLINIC STAFF

Password resets, new accounts, and permission changes go to your Clinic Admin, under **Settings → Users / Roles**. For faults in the system, note the screen, the time, and what you were doing, then report it to your system administrator.

### IF YOU ARE A CLINIC ADMIN

Escalate platform-level problems — clinic setup, access across clinics, system-wide announcements — to the Super Admin.

#### WHEN REPORTING A PROBLEM, INCLUDE THESE FIVE THINGS

1. Which system — Client Portal or Clinic Admin.
2. The screen name.
3. What you expected, and what happened instead.
4. The date and time.
5. The exact wording of any error message.
